

Dynamico

COMPLETE PERFORMANCE

**PRECISION.
PROTECTION.
PERFORMANCE.**

Welcome to Dynamico

Dynamico is a ground-breaking range of deposit control additives developed specifically to offer complete performance for all gasoline engines. Dynamico not only prevents the formation of deposits on inlet valves and fuel injectors, it also cleans existing inlet valve and injector deposits, so complex fuel delivery systems always operate at maximum efficiency and particle emissions are dramatically reduced.

More engine and vehicle manufacturers are turning to GDi technology to ensure global environmental legislation targets are met. These high pressure, high performance engines operate to very tight tolerances and are capable of delivering lower emissions. Experience and industry tests tells us that such precision components needs protecting if the engine is to perform exactly as intended.

Dynamico not only helps to protect your engine but also ensures that emissions from your vehicle do not increase over time, helping to protect the environment and people's health. Emissions testing in accredited facilities has proven that Dynamico has a positive effect in reducing particulate emissions. This reduction can be achieved within one tank of fuel containing Dynamico technology.

Dynamico gets to work in your engine straight away. After adding it to the fuel, deposits coating the fuel delivery system start breaking down. Within one tank, the injector nozzles will be cleaned and continued use of Dynamico stops the build-up of future deposits.

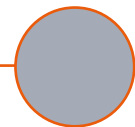

Removes existing fuel system deposits

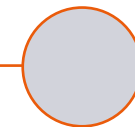

Prevents fuel system fouling

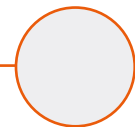

Dramatically reduces particle emissions

Increases fuel efficiency

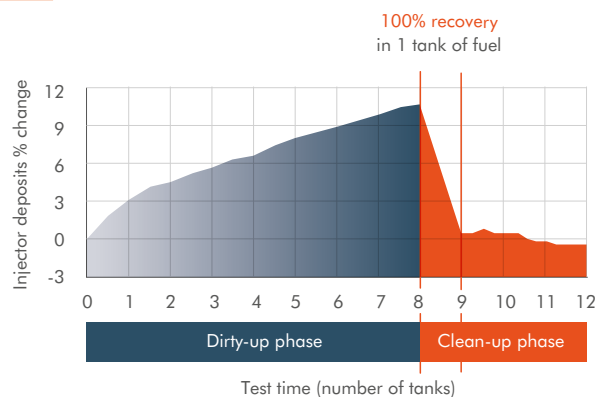

Preserves engine power

Maintains optimum reliability

Dynamico delivers performance without compromise

Clean-up profile

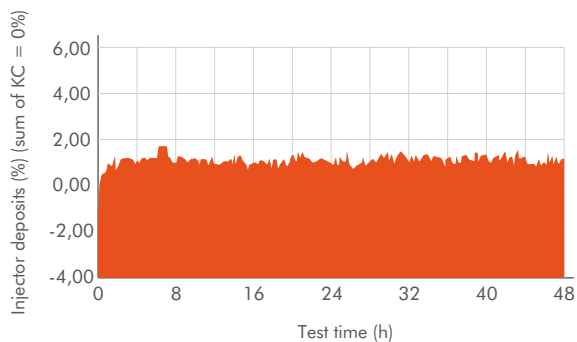

GDi testing - clean-up

The example above illustrates the clean-up achieved in a GDi engine with Dynamico after one tank, and remains clean during normal running.

Keep-clean profile

GDi keep-clean testing with Dynamico demonstrating no increased injector fouling over test duration and excellent deposit control.

Dynamico contains novel and cutting-edge fuel additive technology which ensures engine performance can be reliably maintained over the whole life of a vehicle without affecting the driving experience.

Whilst Dynamico delivers powerful performance within GDi engines, our product range can also offer complete performance for all gasoline engines to ensure that each gasoline vehicle benefits from our product regardless of engine type.

When challenged by demanding new industry engine tests, Dynamico delivers exceptional performance results.

Creating new opportunities

The range provides bulk fuel suppliers and retailers with an opportunity to differentiate their fuel in a fast-changing market.

With the addition of Dynamico, customers benefit from a fuel that keeps an engine running smoothly and improves fuel economy without sacrificing performance for all vehicle and engine types. Dynamico is available in a range of formulations offering different levels of treatment.

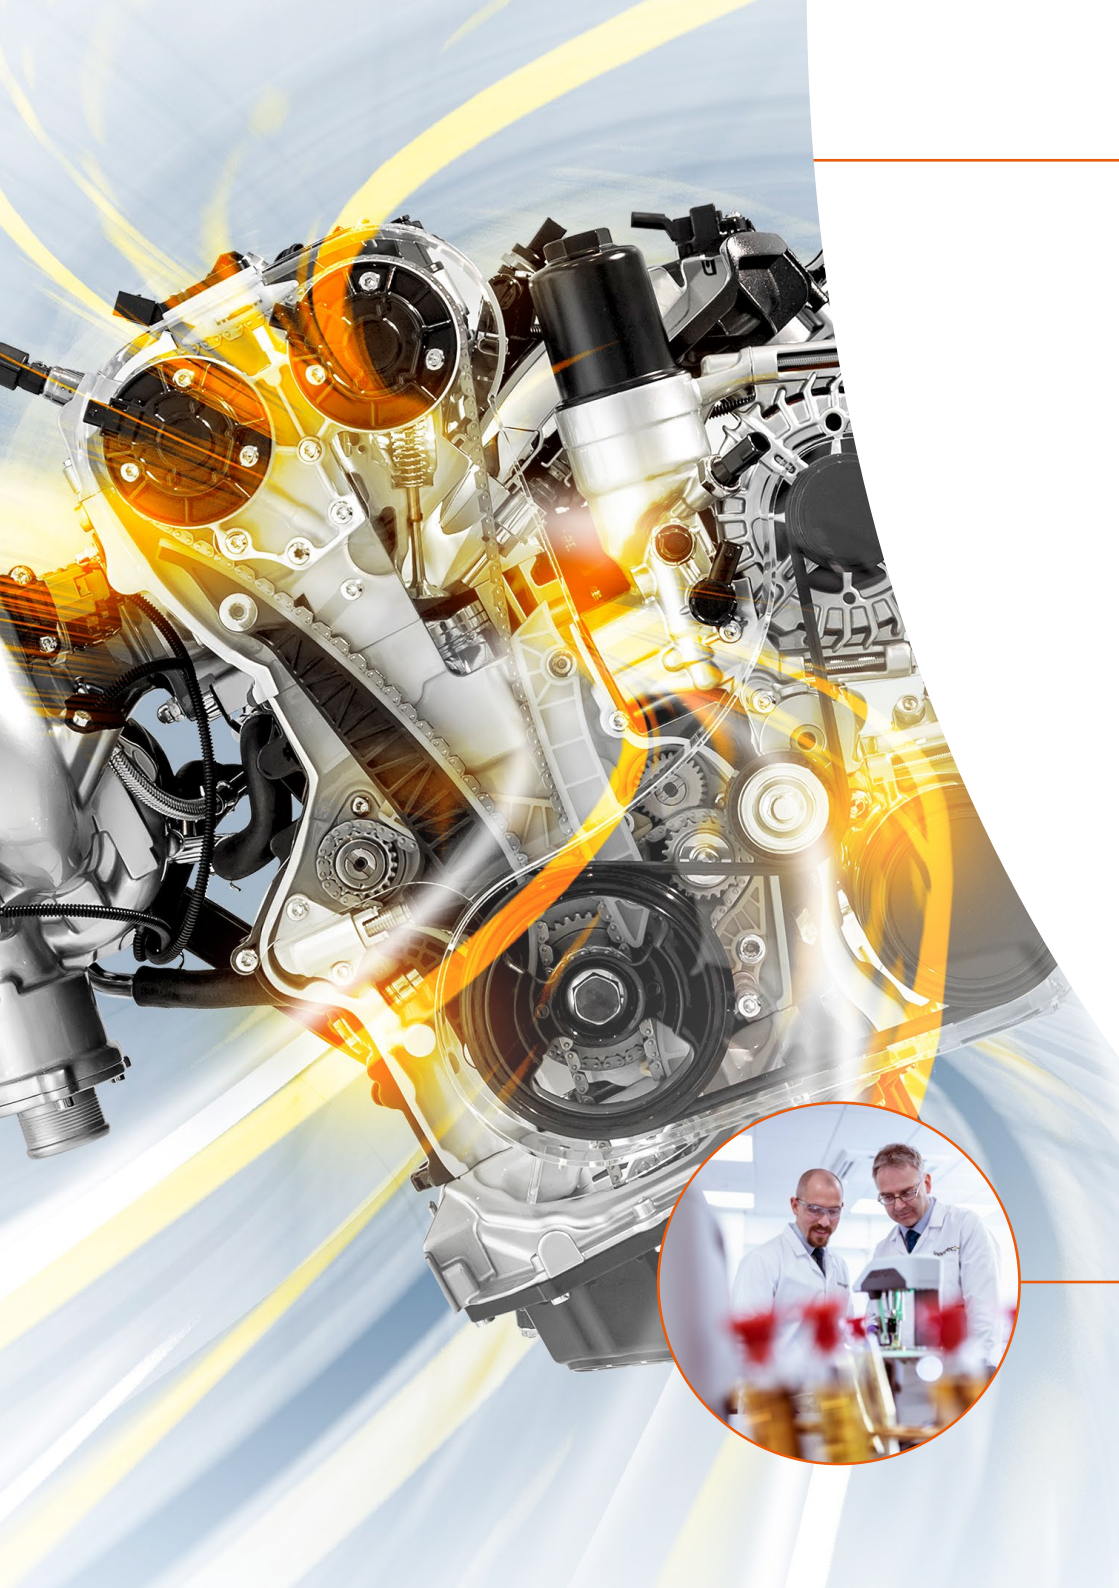

Use our experience, expertise and market understanding to find the solution that works for you. We can help you create fuels that work for your business and your customers.

Building global solutions

Innospec is at the forefront of developing fuel additive technology for a changing world.

Our focus is on supporting the fuel industry as it adapts to major environmental challenges, new legislation and the more demanding performance targets set by OEMs. While we operate at the novel and cutting edge of technology, our goal as market leader is always to create reliable and highly functional products. We build global supply chain solutions by understanding the important differences within regional and national markets. Our worldwide network spans 23 countries.

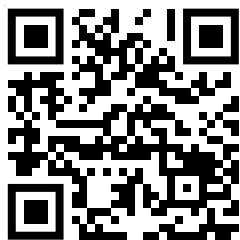

Let us work with you to create the next generation of fuels, today.
